Impasses

Conclusion

Summary

Literature

- it is important to think of all **requirements kinds**
- it is important to communicate with all **stakeholders**

At least the following:

- functional requirements
- interfaces reqs. UI, SW, HW, communication, ...
- non-functional reqs. performance, security, reliability, availability, scalability, ...
- internationalization reqs. legislative, multilingual ...
- accessibility reqs. blinds, deafs, ...

⇒ use the **standard templates** for software specification

# Requirements on requirements

topics

The practice

Impasses

#### Conclusion

Summary

Literature

- Correct
- Unambiguous
- Complete
- Consistent
- Ranked
- Verifiable
- Modifiable
- Traceable

1. **Correct:** The SRS, or software requirements specification, should correctly describe the system behavior. It is not productive to have a requirements document that describes implausible or impossible expected system behavior or user goals.

2. **Unambiguous:** Software requirements should be written in such a manner as they are not subject to different interpretations. The use of specific and appropriate language can help avoid ambiguity in interpretation.

3. **Complete:** the software requirements document should completely describe the system's expected behaviors and feature set.

4. **Consistent:** Requirements for the system under discussion must not contradict each other.

5. **Ranked:** You must rank your software requirements for importance. Each software requirement has its own level of importance and criticality, and they are not all equal. By ranking the requirements, software designers ensure that guidance is given to the development team regarding effective prioritization.

6. **Verifiable:** If the requirement cannot be verified as having been met, then the requirement itself is written poorly. The requirements have to be testable.

7. **Modifiable:** The requirements must be easy to modify or change.

8. **Traceable:** The requirements must be traceable, and it is essential that traceability information has been provided, as the requirements document provides the starting point in the traceability chain. I have written elsewhere in this blog at length about the importance of software requirements traceability and have provided examples of software requirement traceability matrixes. Many software development organizations use proprietary CASE software tools and other methods to enforce traceability policies that stipulate how much traceability information regarding requirements must be maintained.

### Conclusion

Summary

Literature

- What should be the result of analysis?
- What is the content of the output of analysis?
- What is the form of the output of analysis?
- The logical and physical decomposition?
- The level of detail?
- What about the labour-intensity of analysis?
- What about the duration of analysis?
- What about the number of people involved in analysis?
- How to decompose the work between people working in parallel?
- When is the right time to begin with architecture design?
- When the engineer can already start?
- How should the analysis / specifications spread at the time from writing the offer to maintenance of the system?
- What are the differences between the primary specification and the changes specifications (during maintenance?)
- What is the relationship between the specification and architecture (what vs. how)?

### Conclusion

Summary

Literature

- How do I know that the customer provide the right people?
- What qualities should a good analyst has?
- How do I verify that the specification is a specification of what is really wanted?
- It is reasonable to fear to ask?
- It is wise to let approve something of what you are not truly convinced?
- How do I know that my specification is useful?
- What to do with analysts after the analysis?
- How to keep the results of the analysis?
- What is different about the analysis in the development and maintenance?
- Can we skip the analysis?
- How find and recognize the proper boundary conditions?
- How will the requirements change and how to prepare for that?
- How to detect the increase in the scale?
- The phenomenon of "gold-plating"?

And many others ... ..

Specification format

Other interesting  
topics

The practice

Impasses

Conclusion

Summary

Literature

- these disciplines have a large overlap = often mixed
- **Business analysis** focuses on identifying changes necessary for achieving the strategic objectives of the organization.
- It is about changes in:
  - strategy
  - organization structure
  - politics
  - processes & data flows
- many many many methodologies: 😊

PESTLE, HEPTALYSIS, MOST, SWOT, CATWOE, MoSCoW, Five Why's, VPEC-T, ...

### Conclusion

Summary

Literature

## ... the real-life experience

- labor intensity: 10 - 30%
- the work involved in maintenance: 20%
- personal qualities of participants
- the form cannot outshine the content
- the content must be "comprehensive"
- a sufficient description of the scope
- maintainability is the essential thing
- keep principles pure
- distribute expenses according to labor intensity
- be brave
- the GUI model works
- a structured text works
- the template and checklist works
- all types of requirements are handy
- the measured data are needed (screens, ...)
- life will promote what is really needed (the question of how painfully)
- dealing with changing requirements
  - is it change or misunderstanding?
  - is it change or greater level of details?
  - positive or negative definition?
  - scope-fights

### Conclusion

Summary

Literature

- skipping analysis
- not thinking about the architecture
- doing only a catalog or use cases
- ignore other than functional requirements
- not knowing about who is really important stakeholder
- not believing in your own prudence and intuition
- not asking about the things  
"you don't want to hear"

... and many others ...

# Outline

## Software Engineering 2

Dr. Petr  
SPACEK

### Intro

Connection to the  
previous course

### Requirements Engineering

What it is?

Why do we care?

Basic terms

The fundamental  
questions

Specification format

Other interesting  
topics

The practice

Impasses

### Conclusion

Summary

Literature

## 1 Intro

- Connection to the previous course

## 2 Requirements Engineering

- What it is?
- Why do we care?
- Basic terms
- The fundamental questions
- Specification format
- Other interesting topics
- The practice
- Impasses

## 3 Conclusion

- Summary
- Literature

Conclusion

Summary

Literature

Requirements engineering sets the scope of your project

scope  $\Rightarrow$  all your commitments

many kinds of requirements  $\Rightarrow$  be precise, well-structured &  
formatted
